

THE POWER OF PROACTIVITY IN OPERATIONAL SUCCESS

The ability to anticipate challenges and address potential issues before they arise is crucial for driving operational success and long-term growth. Waiting for equipment to break down before repairing it means missing out on significant safety and efficiency benefits.

Here's what you gain from being proactive:

Less downtime; more reliability

Proactive maintenance reduces the need for emergency repairs by 50-65%.¹

Fewer stoppages lead to high productivity, better resource usage and more satisfied customers.

Cost savings

Companies underestimate costs related to downtime by 200-300%.²

Regular maintenance helps prevent issues from escalating to require major, costly repairs.

Enhanced safety

25% of accidents occur on the loading dock, with 600 near-misses for every incident.³

Identifying and addressing hazards proactively can boost safety and regulatory compliance.

Improved efficiency and performance

80% of issues that prevent assets from functioning are preventable.¹

Proactive maintenance ensures that equipment is at peak efficiency and optimizes resource allocation.

Informed decision-making

Factories lose from 5% to 20% of productivity capacity due to downtime.²

Surveys, assessments and digital documentation provide insight into equipment performance and improve planning.

The Bottomline

Investing in proactive maintenance breaks the cycle of costly breakdowns and keeps your facility humming along at peak performance. With MinerCARE® Safety & Service Programs, you are guaranteed a comprehensive approach to ensure every piece of equipment in your facility operates safely and efficiently.
